since 1981

IG7600

“the Ultimate SME* Solution”

*Small Medium Enterprise

Product Description

1. The IG7600 is a stand-alone Business Communications server for small and medium Enterprise.
2. It connects to 4 PSTN lines and broadband access, serving up to 16 users extensions. Also, as options it can wirelessly connected to 8 IP cameras.
3. It is designed with leading-edge technology. The Gateway and associated Apps can turn users smart phones into system extension phones. Anywhere in the world if there is WiFi or 3G(4G) cell phone coverage, users' smart phones can access all 4 PSTN lines at the IG7600 and enjoy all business communications functions such as multi-line use, intercom calls, Hold, Transfer, Conference, voice mail, music on hold, Auto-attendant, and many more.
4. **This Business Communications system** (the IG7600 plus smart phones) operates in a totally wireless manner, no desk-top extension phones are needed.
5. It is a totally NEW concept that business users do not need to be at office to conduct business communications.
6. The only installation is to connect PSTN lines and broad-band access to the Gateway. No wires or cables are needed for all 16 extension users. The Apps for smart phones are network downloadable, it works with the administration software at the Gateway.

Value Propositions for Mobile Carriers

1. A new-generation, unique business communications solution, the IG7600 is specially designed to support smart-phone as its main extension business phones.
2. The IG7600 links smartphones to enterprise business.
3. The IG7600 links smartphone-subscription to mobile carriers.
4. The Mobility Business Communications feature of IG7600 would be extremely useful to mobile carriers' service offering to Small-Medium-Enterprise. The IG7600 unit would be an effective subsidy item in bundling new acquisition as well as retention of SIM subscriptions.
5. It would help mobile carriers enhance their enterprise customer base, a crucial importance as the enterprise smart phone customers generate much higher ARPU.
6. When smartphone users enter the business premises, all operations are converted to WiFi, thus relieve the macro cell traffic loading and solve the usual problems of weaker indoor cell signal coverage.

The IG7600 works with IMS server and interop with carrier existing MVPN services.

- World renowned Small Medium Enterprise Communications System manufacturer since 1981
- Taiwan No.1 Business Communications System maker
- TECOM SME solutions have been picked as ODM products to many world leading Telecom companies, equipment vendors as well as carriers:

In particular, Tecom 4-Line Business Phones leading in USA:

More than 6 millions 4-line system phones shipped under AT&T brand name, from TECOM to USA office super stores (Staples, Office Depot, etc...) since 1993.
